Discover how Dutch parents raise The Happiest Kids in the World! Calling all stressed-out parents: Relax! Imagine a place where young children play unsupervised, don't do homework, have few scheduled "activities" . . . and rank #1 worldwide in happiness and education. It's not a fantasy—it's the Netherlands! Rina Mae Acosta and Michele Hutchison—an American and a Brit, both married to Dutchmen and raising their kids in the Netherlands—report back on what makes Dutch kids so happy and well adjusted. Is it that dads take workdays off to help out? Chocolate sprinkles for breakfast? Bicycling everywhere? Whatever the secret, entire Dutch families reap the benefits, from babies (who sleep 15 hours a day) to parents (who enjoy a work-life balance most Americans only dream of). As Acosta and Hutchison borrow ever-more wisdom from their Dutch neighbors, this much becomes clear: Sometimes the best thing we can do as parents is . . . less!

Over the past half-century, globalization has had a profound impact on postsecondary education. The twin forces of mass higher education and the global knowledge economy have driven an unprecedented transformation. These fundamental changes have pulled in opposite

directions: one pushes for wider access and accompanying challenges of quality, the other toward exclusive, "world class" research-oriented universities. In *Global Perspectives on Higher Education*, renowned higher education scholar Philip G. Altbach offers a wide-ranging perspective on the implications of these key forces and explores how they influence academe everywhere. Altbach begins with a discussion of the global trends that increasingly affect higher education, including the implications of mass enrollments, the logic of mass higher education systems around the world, and specific challenges facing Brazil, Russia, India, and China. He considers the numerous implications of globalization, including the worldwide use of the English language, university cross-border initiatives, the role of research universities in developing countries, the impact of the West on Asian universities, and the expansion of private higher education. Provocative and wide-ranging, *Global Perspectives on Higher Education* considers how the international exchange of ideas, students, and scholars has fundamentally altered higher education.

The humanities include disciplines as diverse as literary theory, linguistics, history, film studies, theology, and philosophy. Do these various fields of study have anything in common that distinguishes them from, say, physics or sociology? The tripartite division between the natural sciences, the social sciences and the humanities may seem self-evident, but it only arose during the course of the 19th century and is still contested today. *History and Philosophy of the Humanities: An Introduction* presents a reasoned overview of the conceptual and historical backgrounds of the humanities. In four sections, it discusses: - the most influential views on scientific knowledge from Aristotle to Thomas Kuhn; - the birth of the modern humanities and its relation to the natural and social sciences; - the various methodological schools and conceptual issues in the humanities; - several themes that set the agenda for current debates in the humanities: critiques of modernity; gender, sexuality and identity; and postcolonialism. Thus, it provides students in the humanities with a comprehensive understanding of the backgrounds of their own discipline, its relation to other disciplines, and the state of the art of the humanities at large.

A "marvelous" Mediterranean memoir of an expatriate father raising his children in Italy—from the author of *Italian Neighbors* (The Washington Post). Tim Parks offers another lively firsthand account of Italian society and culture—this time focusing on all the little things that turn an ordinary newborn infant into a true Italian. When British-born Tim Parks heard a mother at the beach in Pescara shout to her son, "Alberto, don't sweat! No you can't go in the sea till eleven, it's still too cold, go and see your cousin in row three number fifty-two," he was inspired to write about parenting in Italy—which he was doing himself at the time after adopting the country as his own. In this

humorous memoir, Parks offers an enchanting portrait of Italian childhood that shifts from comedy to despair in the time it takes to sing a lullaby. The result is "a wry, thoughtful, and often hilarious book . . . a parable of how our children, no matter what, are other than ourselves" (The New Yorker). "Glimpses of Italy that are fond, critical, pithy and penetrating." -The Atlanta Journal-Constitution

This third edition of Aircraft Systems represents a timely update of the Aerospace Series' successful and widely acclaimed flagship title. Moir and Seabridge present an in-depth study of the general systems of an aircraft - electronics, hydraulics, pneumatics, emergency systems and flight control to name but a few - that transform an aircraft shell into a living, functioning and communicating flying machine. Advances in systems technology continue to alloy systems and avionics, with aircraft support and flight systems increasingly controlled and monitored by electronics; the authors handle the complexities of these overlaps and interactions in a straightforward and accessible manner that also enhances synergy with the book's two sister volumes, Civil Avionics Systems and Military Avionics Systems. Aircraft Systems, 3rd Edition is thoroughly revised and expanded from the last edition in 2001, reflecting the significant technological and procedural changes that have occurred in the interim - new aircraft types, increased electronic implementation, developing markets, increased environmental pressures and the emergence of UAVs. Every chapter is updated, and the latest technologies depicted. It offers an essential reference tool for aerospace industry researchers and practitioners such as aircraft designers, fuel specialists, engine specialists, and ground crew maintenance providers, as well as a textbook for senior undergraduate and postgraduate students in systems engineering, aerospace and engineering avionics.

For the first time, a single volume offers a comprehensive selection of primary readings and companion overview essays on the sociology of organizations. These readings and essays provide incisive and guided coverage of the subjects normally included in a one-semester sociology of organizations course. The Sociology of Organizations covers the full range of theoretical perspectives and substantive topics through readings that are either classics in the field or widely discussed and debated "new classics." Scholars and students in the fields of sociology, management, organizational behavior, and organizational psychology and those within political science and economics who are interested in how organizations function will find this work a welcome, invaluable resource.

Themes of Contemporary Art: Visual Art after 1980 (Fourth Edition) is a unique introduction to eight important themes that have recurred in art over the past few decades-identity, the body, time, memory, place, language, science, and spirituality. Jean Robertson and Craig McDaniel provide an intriguing and accessible guide that will stimulate students, gallery goers, and other readers to think actively and

critically about visual art from 1980 to the present. The opening chapter provides a concise overview of the period, analyzing how key changes (the rise of digital media, a growing awareness of globalization, the influence of theory, the use of the Internet, and interactions with everyday culture) have resulted in an art world with dramatically expanded boundaries. Each of the remaining eight chapters features an introduction to one theme; a brief look at historical precedents and influences; a detailed analysis of how contemporary artists have responded to and embodied aspects of the theme in specific works; and two in-depth and fascinating profiles of artists who have extensively explored aspects of the theme in his or her work. Generously illustrated in full color, *Themes of Contemporary Art: Visual Art after 1980 (Fourth Edition)* covers an international array of artists working with an immense variety of materials, techniques, subjects, and forms. A timeline that situates contemporary art in the context of major events in world history, art, and popular culture enhances the engaging, readable text.

Focusing on auditing as a judgment process, this unique textbook helps readers strike the balance between understanding auditing theory and how an audit plays out in reality. The only textbook to provide complete coverage of both the International Auditing and Assurance Standards Board and the Public Company Accounting Oversight Board, *Auditing* reflects the contemporary evolution of the audit process. New additions to the book include expert updates on key topics, such as the audit of accounting estimates, group audit, and the Integrated Audit. Supplemented by extra on-line resources, students using this established text will be well-equipped to be effective auditors and to understand the role of auditing in the business world.
