novellas. Odette Von Alarissa is a prisoner, her captivity the result of a decades-old war between the dragon shifters and the witches. But there has been a recent change in her ownership. Xaldain Von Rothbart, the traitor responsible for starting the war, is her captor now. A dragon-shifter just like Odette, Xaldain has plans for her that are unimaginable—but with a magical mark on her shoulder that prevents her escape, and the survival of her people hanging in the balance—she has no real choice but to comply. Drekken Von Fiddlestrum has returned to his homeland to find himself in an unhappy quandary. To save his kingdom, he must marry a noble – yet he has no desire to do so. When he crosses paths with Odette, he agrees to help her. But as their feelings for each other grow, it can only lead to destruction for them both. Drekken must marry for duty, and Odette must consent to Xaldain if she wants her people to survive. True love and obligation collide in this compelling retelling of the classic Swan Princess story.

violations of human rights. Nevertheless democracy remains a universally valid system of governance; one which needs to be backed up by constitutionally guaranteed rights. The promotion of genuine democracy and respect for human rights is not only a moral imperative; it is also the determining factor in building sustainable human development and lasting peace. Actions in support of democracy include; the right to participate in the establishment of governments through free and fair elections, make contribution to peace, security and the prevention of conflicts. The focus of this paper shall be on Iraq and its objective is, "Can Democracy Be Achieved"? The suggested forms of post-Saddam Iraqi government can take would be similar to that of Afghanistan under Karzai. A consociational oligarchy theoretically will bring together leading figures from all the major ethnic, religious, tribal, geographic and functional groupings. It might not be a Pluralistic in a strict sense, but it includes all members from all works of life of the Iraqi society. It would represent its key elements, and the members could be expected to protect the most basic interests of their coreligionists and ethnic kin. Whether or not these groups truly represented the interests and aspirations of the Iraqi people would be largely irrelevant (By

This book takes on current perspectives on children ' s relationships to literacy, media, childhood, markets and transtionalism in converging global worlds. It introduces the idea of multi-sited imaginaries to explain how children ' s media and literacy performances shape and are shaped by shared visions of communities that

we collectively imagine, including play, media, gender, family, school, or cultural worlds. It draws upon elements of ethnographies of globalization, nexus analysis and performance theories to examine the convergences of such imaginaries across multiple sites: early childhood and elementary classrooms and communities in Puerto Rico and the Midwest United States. In this work we attempt to understand that the local moment of engagement within play, dramatic experiences, and literacies is not a given but is always emerging from and within the multiple localities children navigate and the histories, possibilities and challenges they bring to the creative moment.

This book offers a full account of thermodynamic systems in chemical engineering. It provides a solid understanding of the basic concepts of the laws of thermodynamics as well as their applications with a thorough discussion of phase and chemical reaction equilibria. At the outset the text explains the various key terms of thermodynamics with suitable examples and then thoroughly deals with the virial and cubic equations of state by showing the P-V-T (pressure, molar volume and temperature) relation of fluids. It elaborates on the first and second laws of thermodynamics and their applications with the help of numerous engineering examples. The text further discusses the concepts of exergy, standard property changes of chemical reactions, thermodynamic property relations and fugacity. The book also includes detailed discussions on residual and excess properties of mixtures, various activity coefficient models, local composition models, and group

In addition, the text focuses on vapour-liquid and other phase equilibrium calculations, and analyzes chemical reaction equilibria and adiabatic reaction temperature for systems with complete and incomplete conversion of reactants. **key Features** Includes a large number of fully worked-out examples to help students master the concepts discussed. Provides well-graded problems with answers at the end of each chapter to test and foster students' conceptual understanding of the subject. The total number of solved examples and end-chapter exercises in the book are over 600. Contains chapter summaries that review the major concepts covered. The book is primarily designed for the undergraduate students of chemical engineering and its related disciplines such as petroleum engineering and polymer engineering.
