Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5–8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9–12 present some advanced Precalculus topics that build on topics introduced in chapters 1–8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

This guide provides an overview of the many components of the popular practice of flipping properties. Coverage spans the flipping process from start to finish—finding, buying, fixing up, and selling—and the variables needed to make all of those steps successful and profitable. Also included is coverage on negotiating, property inspections, mortgages, taxes, and working with contractors, brokers, and real estate agents. The book is perfect for responsible investors who want to flip houses the right way and steer clear of legal gray areas that get some investors into trouble.
