Portraits of Place in Antarctica: Photographic essays to be published in a single volume. Tracing the culture of Antarctic science and exploration from the "Heroic Age of Exploration" at the turn of the 20th century to the modern day through the architecture, and infrastructure of the stations, with visits to McMurdo Station (2015), Palmer Station (2017), and Amundsen-Scott South Pole Station (2019).

*Antarctic Artists & Writers Program | NSF - National ...*

There have been women in Antarctica and exploring the regions around Antarctica for many centuries. Oral tradition of Māori explorers reaching Antarctic waters as early as 650 CE, put women on the Antarctic map. The most celebrated "first" for women was in 1935 when Caroline Mikkelsen became the first woman to set foot on one of Antarctica's islands. ...

A profile of Antarctica and its indigenous life traces the history of regional exploration and the science currently being conducted there while explaining how Antarctica reveals key insights into the planet's environmental future.

The acclaimed science writer presents a wide-ranging exploration of Antarctica's history, nature, and global significance in this "rollicking good read" (Kirkus). From the early expeditions of Ernest Shackleton to David Attenborough's documentary series Frozen Planet, the continent of Antarctica has captured the world's imagination. After the Antarctic Treaty of 1961, decades of scientific research revealed the true extent of its many mysteries. Now former Nature magazine staff writer Gabrielle Walker tells the full story of Antarctica—from its fascinating history to its uncertain future and the international teams of researchers who brave its forbidding climate. Drawing on her broad travels across the continent, Walker weaves all the significant threads of life on the vast ice sheet into a multifaceted narrative, illuminating what it really feels like to be there and why it draws so many different kinds of people. She chronicles cutting-edge science experiments, visits to the South Pole, and unsettling portents about our future in an age of global warming. "We are all anxious Antarctic watchers now, and Walker's book is the essential primer."—The Guardian, UK

There have been many books about Antarctica in the past, but all have focused on only one aspect of the continent - its science, its wildlife, the heroic age of exploration, personal experiences or the sheer awesome beauty of the landscape, for example - but none has managed to capture whole story, till now. Gabrielle Walker, author, consultant to New Scientist and regular broadcaster with the BBC has written a book unlike any that has ever been written about the continent. Antarctica weaves all the significant threads into an intricate tapestry, made up of science, natural history, poetry, epic history, what it feels like to be there and why it draws so many different kinds of people back there again and again. It is only when all the parts come together that the underlying truths of the continent emerge. Antarctica is the most alien place on Earth, the only part of our planet where humans could never survive unaided. It is truly like walking on another planet. And yet, in its silence, its agelessness and its mysteries lie the secrets of our past, and of our future.

Follows the author's trip to McMurdo Station in Antartica, where she discovers how a community can allow a life to reset.

Documents the scientific explorations of Antarctica, examining its unique climate, natural environment, and native life forms, and discusses how these studies can affect research in climate change, microbiology, and life on other planets.

It is the coldest, windiest, driest place on earth, an icy desert of unearthly beauty and stubborn impenetrability. For centuries, Antarctica has captured the imagination of our greatest scientists and explorers, lingering in the spirit long after their return. Shackleton called it "the last great journey"; for Apsley Cherry-Garrard it was the worst journey in the world. This is a book about the call of the wild and the response of the spirit to a country that exists perhaps most vividly in the mind. Sara Wheeler spent seven months in Antarctica, living with its scientists and dreamers. No book is more true to the spirit of that continent—beguiling, enchanted and vast beyond the furthest reaches of our imagination. Chosen by Beryl Bainbridge and John Major as one of the best books of the year, recommended by the editors of Entertainment Weekly and the Chicago Tribune, one of the Seattle Times's top ten travel books of the year, Terra Incognita is a classic of polar literature.

In the desolate continent of Antarctica, the United States Government has set up three bases operated by the Raytheon corporation. These alleged ports of high science have seen little if any technical endeavours this century; nevertheless, the charade continues and many dozens of workers are cooped up together in high-tech communes. Harassed by a tic-tac bureaucracy that makes the Soviet Union look free and easy, these bases are filled with highly neurotic individuals who use their free time playing mind games with one another.

Gavin Francis fulfilled a lifetime's ambition when he spent fourteen months as the basecamp doctor at Halley, a profoundly isolated British research station on the Caird Coast of Antarctica. So remote, it is said to be easier to evacuate a casualty from the International Space Station than it is to bring someone out of Halley in winter. Antarctica offered a year of unparalleled silence and solitude, with few distractions and a very little human history, but also a rare opportunity to live among emperor penguins, the only species truly at home in the Antarctic. Following Penguins throughout the year — from a summer of perpetual sunshine to months of winter darkness — Gavin Francis explores the world of great beauty conjured from the simplest of elements, the hardship of living at 50 c below zero and the unexpected comfort that the penguin community bring. Empire Antarctica is the story of one man and his fascination with the world's loneliest continent, as well as the emperor penguins who weather the winter with him. Combining an evocative narrative with a sublime sensitivity to the natural world, this is travel writing at its very best

A tour of the ice-covered continent documents the environment, wildlife, physical geography, and intrepid explorers of the coldest, windiest, driest, and least populated corner of the world
