Asimov traces the ancestry of humankind, starting with historical times and moving backward to find the origins of ancient man, hominids, mammals, chordates, microorganisms, and the universe. His discourse is capable, but superficial and unenlivened by fresh anecdotes, a la Stephen Jay Gould, or original ideas.

Where did we come from? Why are we here on Earth? What is our purpose? Lytle Robinson gives us a comprehensive interpretation of the fascinating story of our history and future here on earth, as given by the Edgar Cayce readings. The Edgar Cayce readings address the many questions whose answers have eluded us all in our quest for the truth about where we come from and where we are going. What is the story of our creation? Who were the "sons of gods" and the "daughters of men"? How does mythology fit in with our history? What is our purpose and destiny in the earth? This is a captivating account you will not be able to put down, or soon forget.

This New York Times bestseller "elegantly weaves evidence and insights . . . into a single, accessible historical narrative" (Bill Gates) and presents a captivating history of the universe -- from the Big Bang to dinosaurs to mass globalization and beyond. Most historians study the smallest slivers of time, emphasizing specific dates, individuals, and documents. But what would it look like to study the whole of history, from the big bang through the present day -- and even into the remote future? How would looking at the full span of time change the way we perceive the universe, the earth, and our very existence? These were the questions David Christian set out to answer when he created the field of "Big History," the most exciting new approach to understanding where we have been, where we are, and where we are going. In Origin Story, Christian takes readers on a wild ride through the entire 13.8 billion years we've come to know as "history." By focusing on defining events (thresholds), major trends, and profound questions about our origins, Christian exposes the hidden threads that tie everything together -- from the creation of the planet to the advent of agriculture, nuclear war, and beyond. With stunning insights into the origin of the universe, the beginning of life, the emergence of humans, and what the future might bring, Origin Story boldly reframes our place in the cosmos.

Evolution of today's natural world and it's life starting from birth of the universe. Covers development of Man, agriculture, fossil record of homo sapiens, rise and extinction of dinosaurs, rise of amphibians, reptiles, fishes. Transition from sea to land. Evolution of flying insects. Beginnings of single-celled life.

Works backwards from the dawn of civilizations to trace the origins of various life forms, the creation of the continents, the atmosphere, and the oceans, and finally to illuminate the origins of the solar system, stars, and the galaxies

Humanity is by many measures the biggest success story in the animal kingdom; but what are the costs of this triumph? Over its three million years of existence, the human species has continuously modified nature and drained its resources. In Cataclysms, Laurent Testot provides the full tally, offering a comprehensive environmental history of humanity's unmatched and perhaps irreversible influence on the world. Testot explores the interconnected histories of human evolution and planetary deterioration, arguing that our development from naked apes to Homo sapiens has entailed wide-scale environmental harm. Testot makes the case that humans have usually been catastrophic for the planet, "hyperpredators" responsible for mass extinctions, deforestation, global warming, ocean acidification, and unchecked pollution, as well as the slaughter of our own species. Organized chronologically around seven technological revolutions, Cataclysms unspools the intertwined saga of humanity and our environment, from our shy beginnings in Africa to today's domination of the planet, revealing how we have blown past any limits along the way—whether by exploding our own population numbers, domesticating countless other species, or harnessing energy from fossils. Testot's book, while sweeping, is light and approachable, telling the stories—sometimes rambunctious, sometimes appalling—of how a glorified monkey transformed its own environment beyond all recognition. In order to begin reversing our environmental disaster, we must have a better understanding of our own past and the incalculable environmental costs incurred at every stage of human innovation. Cataclysms offers that understanding and the hope that we can now begin to reform our relationship to the Earth.

Traces the origins and evolution of human beings, from the earliest prehistoric fossil record to the latest evidence based on genetic research.

Humanity today functions as a gigantic, world-encompassing system. Renowned world historian, Patrick Manning traces how this human system evolved from Homo Sapiens' beginnings

over 200,000 years ago right up to the present day. He focuses on three great shifts in the scale of social organization - the rise of syntactical language, of agricultural society, and today's newly global social discourse - and links processes of social evolution to the dynamics of biological and cultural evolution. Throughout each of these shifts, migration and social diversity have been central, and social institutions have existed in a delicate balance, serving not just their own members but undergoing regulation from society. Integrating approaches from world history, environmental studies, biological and cultural evolution, social anthropology, sociology, and evolutionary linguistics, Patrick Manning offers an unprecedented account of the evolution of humans and our complex social system and explores the crises facing that human system today.

Ten million years ago in tropical Africa, some large primates were finally forced to stand upright and walk on two feet - this would form the beginnings of the human race. This book tells the complete story of the human evolution and the development of mankind.

“ Thoroughly engrossing . . . a spirited, suspenseful, economically told tale whose significance is manifest and whose pace never flags. ” —The Wall Street Journal From The New York Times – bestselling author of *The Ghost Map* and *Extra Life*, the story of a pirate who changed the world Henry Every was the seventeenth century ' s most notorious pirate. The press published wildly popular—and wildly inaccurate—reports of his nefarious adventures. The British government offered enormous bounties for his capture, alive or (preferably) dead. But Steven Johnson argues that Every ' s most lasting legacy was his inadvertent triggering of a major shift in the global economy. *Enemy of All Mankind* focuses on one key event—the attack on an Indian treasure ship by Every and his crew—and its surprising repercussions across time and space. It ' s the gripping tale of one of the most lucrative crimes in history, the first international manhunt, and the trial of the seventeenth century. Johnson uses the extraordinary story of Henry Every and his crimes to explore the emergence of the East India Company, the British Empire, and the modern global marketplace: a densely interconnected planet ruled by nations and corporations. How did this unlikely pirate and his notorious crime end up playing a key role in the birth of multinational capitalism? In the same mode as Johnson ' s classic nonfiction historical thriller *The Ghost Map*, *Enemy of All Mankind* deftly traces the path from a single struck match to a global conflagration.
