Logistics, to include the various aspects of supply chain

management and the follow-on

maintenance and support of systems, is addressed from a total lifecycle view

and must be considered in all phases of a program; that is, logistics must

be considered as an inherent element in the system design process, as it constitutes a major activity in the construction and/or production of a system and its components.

effectiveness is a major competitive advantage that manufacturers simply cannot afford to underestimate.

Clearly then, to remain competitive in today's international market

place, companies must institute programs for reducing system maintenance and support costs-- comprehensive programs that are an integral part of the design and development process from its earliest conceptual stages. This book

Maintainability
features many case
