Non-verbal communication - the eye movements, facial expressions, tone of voice, postures and gestures that we all use more or less consciously and more or less effectively - can enhance or diminish every form of social interaction. Michael Argyle's second edition of Bodily Communication is an invaluable up-to-date guide for students of the subject. In the last ten years NVC has become recognized as an important part of social psychology and of professional training, particularly in social work, education and management. Greatly expanded from the first edition, and significantly revised, this second edition has two completely new chapters on social skills and personality, and a new chapter on research methods. The author, a pioneer in the study of non-verbal communication, presents the second edition in the same accessible style as the first, bringing to the reader both his intense interest in the subject and his authoritative knowledge of it.

Robert Bly, renowned poet and author of the ground-breaking bestseller Iron John, mingles essay and verse to explore the Shadow -- the dark side of the human personality -- and the importance of confronting it.

In The Psychology of Social Class, leading social psychologist Michael Argyle provides a comprehensive account of psychological and other research into social class using data from Britain, the United States and elsewhere. By addressing differences in social class, the book broadens the perspective of social psychological research to examine such topics as the effect of achievement motivation and other personality variables on social mobility and the effect of social class on health. After examining the historical development of class and the attempts to abolish it, Argyle describes the class system currently existing in Britain and compares it with others in the modern world. Included are discussions of psychological models of class, and hierarchies in small groups and social organizations. A detailed account is provided of class differences in behavior and beliefs, covering such aspects as marriage, friendship, speech, style, personality, sexual behavior, crime, religion, and leisure. Finally, Argyle examines the images people have of the class system, the effects of class on well-being, and discusses possible explanations of class differences in terms of genetics, socialization, work experience, differences in lifestyle and the sheer effects of social status.

Is psychology good for our health? What is the effect of class on social behaviour? In this comprehensive and fully up-to-date account of the psychology of everyday life, Michael Argyle looks at the most interesting and practically important areas of social psychology. He takes social psychology out of the laboratory into real-life settings and helps us to understand the world in which we live. He covers many of the pressing concerns of the day - conflict and aggression, racial prejudice, social class, relationships, health, happiness - and emphasises the practical applications of social psychology.

This is an extensive study of the history and literature of Jungian psychology, especially in relation to women's psychology. Dr. Douglas shows how 20th century psychology viewed the feminine most often as "other," the shadow-realm for man's projections, for the uncanny, the ambiguous and the immature. She recovers heretofore forgotten theory and writers who hold a fairer and more healing view.

This volume presents the results of a series of studies carried out by the author focusing on the role of posture and gesture in interpersonal communication. The first section of the book sets these studies in the general context of non-verbal communication research; in addition, previous research on posture and gesture is reviewed in order to highlight the particular issues which were chosen as the focus of research reported here. In Part II, six experiments are presented concerning the extent to which posture communicates information about listener emotions and attitudes. The seven studies reported in Part III are concerned with the relationship between posture, gesture and speech. The final section summarizes the main findings from the studies presented in this volume, discussing their theoretical and practical significance and considering their implications for the way in which research on non-verbal communication is carried out.
