Bones & All is a coming of age story with cannibals. * Dark, but not graphic. * Disturbing, but not scary. For a different kind of YA novel, Bones & All may be to your tastes. (All puns intended.) Bones & All tries to be a lot of things. Creepy and subtle horror. Coming of age story. Awkward YA romance.

~~Bones & All by Camille DeAngelis - Goodreads~~

Camille DeAngelis' Bones & All is an astonishingly original coming-of-age tale that is at once a gorgeously written horror story as well as a mesmerizing meditation on female power and sexuality. ALA Alex Awards Winner (Adult for Young Adults) Book Excerpt. Reviews.

SOON TO BE A MAJOR MOTION PICTURE 2015 Alex Award Recipient! Maren Yearly is a young woman who wants the same things we all do. She wants to be someone people admire and respect. She wants to be loved. But her secret, shameful needs have forced her into exile. She hates herself for the bad thing she does, for what it's done to her family and her sense of identity; for how it dictates her place in the world and how people see her--how they

judge her. She didn't choose to be this way. Because Maren Yearly doesn't just break hearts, she devours them. Ever since her mother found Penny Wilson's eardrum in her mouth when Maren was just two years old, she knew life would never be normal for either of them. Love may come in many shapes and sizes, but for Maren, it always ends the same—with her hiding the evidence and her mother packing up the car. But when her mother abandons her the day after her sixteenth birthday, Maren goes looking for the father she has never known, and finds much more than she bargained for along the way. Faced with a world of fellow eaters, potential enemies, and the prospect of love, Maren realizes she isn't only looking for her father, she's looking for herself. Camille DeAngelis' *Bones & All* is an astonishingly original coming-of-age tale that is at once a gorgeously written horror story as well as a mesmerizing meditation on female power and sexuality.

Life Without Envy by Camille DeAngelis is a game-changer for artists of all stripes: a practical guide for navigating the feelings of jealousy, frustration, and inadequacy we all experience to create a happy life regardless of how your career is (or isn't) going. In these pages you'll find strategies for escaping the negative feedback loop you get stuck in whenever you compare yourself to your fellow artists. You'll begin to resolve your hunger for recognition, shifting your mindset from “proving yourself” to making a contribution and becoming part of a supportive creative community. Best of all, you'll come to understand that your worth—as an artist and a human being—has nothing to do with how your work is received in the wider world. *Life Without Envy* offers a blueprint for real and lasting contentment no matter what setback you're weathering in your creative life.

In 1915, eleven-year-old Josie Clifford lives in a home in Edwardstown with her little sister, their young tutor, and their mother, a psychic medium celebrated and feared by their

community. In the summer of 2015, twelve-year-old Alec Frost moves into the same Edwardstown home with his mother. One day, Alec discovers a hand-painted spirit board in a forgotten drawer in the old house. He uses the board one night and accidentally contacts Josie and her sister in 1915. Over the next few spirit board sessions Josie and Alec realize they are living in the same house a century apart, and they form a close friendship. When Josie's mother discovers what Josie's been up to, she becomes intent on using what Alec knows to further her own reputation. Alec must use his knowledge from 2015, and what he finds out about the girls, to help save them from their cruel mother.

Essentials of Clinical Radiation Oncology is a comprehensive, user-friendly clinical review that summarizes up-to-date cancer care in an easy-to-read format. Each chapter is structured for straightforward navigability and information retention beginning with a "quick-hit" summary that contains an overview of each disease, its natural history, and general treatment options. Following each "quick-hit" are high-yield summaries covering epidemiology, risk factors, anatomy, pathology, genetics, screening, clinical presentation, workup, prognostic factors, staging, treatment paradigms, and medical management for each malignancy. Each treatment paradigm section describes the current standard of care for radiation therapy including indications, dose constraints, and side effects. Chapters conclude with an evidence-based question and answer section which summarizes practice-changing data to answer key information associated with radiation treatment outcomes. Flow diagrams and tables consolidate information throughout the book that all radiation oncologists and related practitioners will find extremely useful when approaching treatment planning and clinical care. Essentials of Clinical Radiation Oncology has been designed to replicate a "house manual" created and used by residents in training and is a "one-stop" resource for practicing radiation oncologists, related practitioners, and radiation oncology residents

entering the field. Key Features: Offers digestible information as a learning guide for general practice Examines essential clinical questions which are answered with evidence-based data from important clinical studies Places clinical trials and data into historical context and points out relevance in current practice Provides quick reference tables on treatment options and patient selection, workup, and prognostic factors by disease site

Biogenic amines have been known for some time. These compounds are found in varying concentrations in a wide range of foods (fish, cheese, meat, wine, beer, vegetables, etc.) and their formations are influenced by different factors associated to those foods (composition, additives, ingredients, storage, microorganism, packaging, handling, conservation, etc.). The intake of foods containing high concentrations of biogenic amines can present a health hazard. Additionally, they have been used to establish indexes in various foods in order to signal the degree of freshness and/or deterioration of food. Nowadays, there has been an increase in the number of food poisoning episodes in consumers associated with the presence of these biogenic amines, mainly associated with histamines. Food safety is one of the main concerns of the consumer and safety agencies of different countries (EFSA, FDA, FSCJ, etc.), which have, as one of their main objectives, to control these biogenic amines, principally histamine, to assure a high level of food safety. Therefore, it is necessary to deepen our understanding of the formation, monitoring and reduction of biogenic amines during the development, processing and storage of food, even the effect of biogenic amines in consumers after digestion of foods with different levels of these compounds. With this aim, we are preparing a Special Issue on the topic of "Biogenic Amines in Food Safety", and we invite researchers to contribute original and unpublished research articles and reviews articles that involve studies of biogenic amines in food, which can provide an update to our knowledge of these compounds and their impacts on food quality and food safety.

The adipokine adiponectin is very concentrated in plasma, and decreased levels of adiponectin are associated with pathological conditions such as obesity, diabetes, cardiovascular diseases, and metabolic syndrome. When produced in its full-length form, adiponectin self-associates to generate multimeric complexes. The full-length form of adiponectin can be cleaved by the globular form of elastase that is produced locally, and the resulting biological effects are exerted in a paracrine or autocrine manner. The different forms of adiponectin bind to specific receptors consisting of two G-protein-independent, seven-transmembrane-spanning receptors, called AdipoR1 and AdipoR2, while T-cadherin has been identified as a potential receptor for high molecular weight complexes of adiponectin. Adiponectin exerts a key role in cellular metabolism, regulating glucose levels as well as fatty acid breakdown. However, its biological effects are heterogeneous, involving multiple target tissues. The Special Issue “ Mechanisms of Adiponectin Action ” highlights the pleiotropic role of this hormone through 3 research articles and 7 reviews. These papers focus on the recent knowledge regarding adiponectin in different target tissues, both in healthy and in diseased conditions.

Signaling Pathways in Liver Diseases, Third Edition again provides hepatologists and hepatology researchers with an expert overview of the complex and novel cellular/extracellular signaling pathways in the liver, and their role in liver diseases. The last few years have seen a great number of developments in this field, which in turn have led to new opportunities for innovative treatments; however, the intricacy of these pathways and their interactions continue to provide a real challenge for clinicians. This outstanding book

compiles the emerging knowledge into a single expert resource, cataloguing and organizing it into an accessible and understandable format. With increased focus on the comprehension of cellular mechanisms involved in steatohepatitis, cirrhosis, and liver tumors, which has led to changes in the management of these diseases, this new edition also sees the introduction of exciting new chapters on key emerging areas such as: Autophagy Notch Pathway P13K/PTEN Signaling in Liver Diseases Sirtuins Hepcidin and Iron Epigenetic Regulation of Hepatic Stellate Cells and Liver Fibrosis Oxidative Stress and Signaling in the Liver. Professors Dufour and Clavien have assembled an all-star cast of chapter authors, each of whom has provided clear and appropriate illustrations to reinforce the text, with a key points box offering a concise and handy summary. Self-assessment questions and answers allow the reader to test their own knowledge. Signaling Pathways in Liver Disease, Third Edition is the perfect educational and reference tool to bridge the information exchange between the laboratory, the clinical ward, and the operating room, and an essential tool for the modern-day hepatologist.

How to think politics with and through the body? The invention of new modes of sensibility is vital to enriching and sustaining political engagements, labours and lives in the situated contexts of urban collectivity. The nanopolitics handbook investigates the neoliberal city and workplace, the politics of crisis and austerity, precarious lives and modes of collaboration - through bodies and their encounters. Starting from the exploration of what bodies can do - with curiosity, courage and care - nanopolitics is a proposal for producing new collective subjectivations. Based on the experiments and experiences of the nanopolitics group, this book proposes exercises, concepts and ideas as little maps and machines for action. Drawing on social movements, grassroots organizing, dance, theatre and bodywork, the reflections and practices here present strategies for navigating and reconfiguring the playing field of 'nanopolitics',
