This booklet contains typical midterm and final exams that you may encounter in any Calculus I course (for non-Math majors) at just about any university in North America. Calculus I course typically covers the following topics: limits of functions, continuity, derivatives, related rates, maxima and minima (local and global/absolute), the Extreme Value Theorem, the Mean Value Theorem (MVT), indefinite integrals, and the Fundamental Theorem of Calculus. If you are preparing for a Calculus exam, or are reviewing the material from Calculus I, or are thinking about taking this course, this booklet will be quite useful. Note that it is expected that you solve the midterm and final exams in this booklet within one and two hours, respectively. You should first attempt all problems on your own and then check your answers using the respective answer key. You should not be looking at solutions before that. This is the best way for you to learn. Good luck!

Written by a current PhD student in mathematics, this calculus study guide contains detailed step-by-step solutions to problems from past tests and exams at the University of Toronto. Based on the MAT 135/136 course, this handbook was written with the student in mind. While the problems originate from U of T, the material is easily comparable to any introductory university calculus course that doesn't focus on proofs. For a more rigorous approach, see the MAT 137 guide. After being a teaching assistant for the course for several years, Sergio found students constantly asking about solutions from other help manuals. The solutions were either wrong or poorly explained. He saw the need for a more comprehensive solution manual that explained every step in detail. Before beginning his PhD at Cornell University, he wrote this study guide to better help students having difficulty with mathematics.
