### Civetta Taylor Kirbys Critical Care

From the Division of Pulmonary and Critical Care Medicine (D.C.M., M.K.G.), the Department of Health Research and Policy (M.K.G.), and the Center for Primary Care and Outcomes Research (M.K.G ...

Covering every problem encountered in today's intensive care unit, this leading critical care textbook presents the knowledge and expertise of more than 350 global experts in this fast-changing field. Beginning with the social aspects of medicine, it then discusses monitoring and organ system pathobiology followed by specific diseases states/syndromes. Each chapter begins with immediate concerns and proceeds to broader-based discussions of relevant pathophysiologic and clinical issues.

Now in its fourth edition, this leading critical care textbook contains more than 30 new chapters and completely updated information. The book addresses every problem encountered in the intensive care unit and covers surgical critical care more thoroughly than any other text.

Based on the 4th edition of the renowned textbook of the same name, this softcover manual focuses on the information necessary to make clinical decisions in the ICU. It begins with a crucial section on responding to emergency situations in the ICU. It proceeds to cover the most relevant clinical information in all areas of critical care including critical care monitoring, techniques and procedures, essential physiologic concerns, shock states, pharmacology, surgical critical care, and infectious diseases. The manual also contains thorough reviews of diseases by organ system: cardiovascular diseases, respiratory disorders, neurologic and gastrointestinal disorders, renal, endocrine, skin and muscle diseases, and hematologic/ oncologic diseases. This essential new resource is written in an easy-to-read style that makes heavy use of bulleted lists and tables and features an all-new full color format with a color art program. All critical care providers will find this a useful clinical resource.

Guiding FFICM and EDIC exam candidates through the intensive care medicine curriculum, this book provides 48 case studies mapped to eight key areas of study in the UK and European syllabuses. Cases include clinical vignettes, explanations and a list of key learning points, while also being formatted along the structure of FICM case reports. Key clinical management points are identified and linked to appropriate scientific or evidence-based research and case studies chosen reflect a general population relevant to a worldwide readership. Conditions covered are significant to large areas of clinical practice as well as more discrete specialist knowledge, making this an essential study guide for trainees preparing for exams in intensive care medicine and also a useful learning tool for candidates in related disciplines such as anaesthesia (FRCA), emergency medicine (MCEM) and surgery (MRCS).

The classic text in critical care medicine! The 3rd Edition of this classic text is streamlined and focused on the needs of the working critical care physician and features important new treatment strategies. Organized by organ systems, this text, the only critical care source that includes evidence-based learning, guides physicians from initial patient assessment and differential diagnosis through therapeutic plan.

This text provides the reader a starting point for the most difficult and uncommon complications in acute care surgery. It is designed to provide options to that ubiquitous intra-operative or bedside question "Well, now what do we do with this?" The topics have been chosen for the extreme difficulty of management and the surprising regularity that they present and the lack of large volume of accumulated evidence, where expert experience remains vital. The volume editors present a list of clinical scenarios, intra-operative findings, and ethical circumstances that few general surgeons in their career will see in their career. The authors represent the most prolific surgeons in practice today. They present how they would manage these challenging acute care surgery problems based on their vast clinical experience. Here, these surgeons share their personal experience with the most difficult cases. The text is divided into 4 parts. The first part is "Global Patient Issues" when a singular surgical problem presents itself in a very complicated patient with an extensive list of unstable co-morbid diseases. The second part is "Specific Disease Issues". This is a surgical text and as such each issue is an unexpected intra-operative finding and expert management. The third part is "Post-Operative Issues" and as any seasoned surgeon knows, is the most critical part of managing a complicated surgical case. The last section is "Challenging Ethical Scenarios." The text is designed to provide the surgeon in training or the seasoned general surgeon unique clinical or operative options for the care of their patients.

The Washington Manual of Critical Care is a concise pocket manual for physicians and nurses. It is distinguished from the multitude of other critical care handbooks on the market by its consistent presentation of algorithms displaying the decision-making pathways used in evaluating and treating disorders in the ICU. The new edition transitions to a full color format and will include coverage of Deep Venous Thrombosis/Pulmonary Embolism, fetal-maternal critical care, C difficile infection, and alternative hemodynamic monitoring.
