Robert Venturi: Architecture's Improper Hero Part 1Complexity And Contradiction In Architecture

A "gentle manifesto for a nonstraightforward architecture," Venturi ' s Complexity and Contradiction in Architecture expresses in the most compelling and original terms the postmodern rebellion against the purism of modernism. Three hundred and fifty architectural photographs serve as historical comparisons and illuminate the author's ideas on creating and experiencing architecture.

Complexity and Contradiction in Architecture: Robert ...

architecture evokes many levels of meaning and combina-tions of focus: its space and its elements become readable and workable in several ways at once. But an architecture of complexity and contradiction has a special obligation toward the whole: its truth must be in its totality or its implications of totality. It must embody

Complexity and Contradiction in Architecture

The "dialectical narrative" follows that architecture, as lineage, modernism included (in it's best sense), is complex and contradictory. Finis. The greater point is that this implies many other good things about architecture.

Complexity and Contradiction in Architecture by Robert Venturi

"I am especially pleased to have had the wit to assert in [my original introduction] the Complexity and Contradiction was 'the most important writing on the making of architecture since Le Corbusier's Vers une Architecture, of 1923.'

Complexity and Contradiction in Architecture: Robert ...

Complexity and Contradiction in Architecturemarks a turning point in American architecture and architectural theory. In the early 1980s, Philip Johnson declared, with extravagant insouciance: “ Venturi is the most important architect in the world today.... He revolutionized architecture with Complexity and Contradictionin the 1960s.

In Western architecture: Postmodernism ... (1961) and American Robert Venturi ' s Complexity and Contradiction in Architecture (1966). Jacobs criticized the destruction of urban coherence that was wrought by the presence of Modernist buildings, while Venturi implied that Modernist buildings were without meaning, as their puritanical design lacked the irony and complexity that enrich historical architecture.

~~Complexity and Contradiction in Architecture | book by ...~~

Robert Venturi in Complexity and Contradiction in Architecture addresses architecture as the only place where redundant and simple construction, in thinking and in material reality, takes shape. All other art forms indulge and promote complexity in their art form especially in the multiplicity that occurs in poetry, fine art and even mathematics, which build on the multitude of possibilities to creating the art.

Whereas some of his acolytes have firmly established the notion that Complexity and Contradiction reintroduced history into contemporary architectural discourse as well as an appreciation of the formal repertoire of the Classical language of architecture, that was precisely not what Venturi argued for. Rather, he was interested in using the history of architecture – entirely subjectively and guided by his own taste preferences – not as a repository of forms, but of abstract compositional ...

He published his "gentle manifesto", Complexity and Contradiction in Architecture in 1966; in its introduction, Vincent Scully called it "probably the most important writing on the making of architecture since Le Corbusier 's Vers Une Architecture of 1923."

~~Robert Venturi – Wikipedia~~

Complexity and Contradiction in Architecture was based in large part on materials Venturi assembled for the lecture course he taught at the University of Pennsylvania from 1961 to 1965, on which he collaborated, in part, with Denise Scott Brown, his future partner and wife.

~~Complexity and Contradiction in Architecture | Penn ...~~

For Venturi, the contradiction and complexity are inherent to the discipline of architecture and can be observed on yet another level in a form of relationships between the inside and the outside....

A practicing architect discusses the theoretical background of modern architecture

Foreword by Arthur Drexler. Introduction by Vincent Scully.

This new collection of writings in a variety of genres argues for a generic architecture defined by iconography and electronics, an architecture whose elemental qualities become shelter and symbol.

In the 1960s, American architect Robert Venturi made a case for the difficult whole, opposing mainstream modern architecture that ignores all the intricacies of life and produces pure space, or "easy unity". The architecture Venturi was aiming for embraces diversities, inevitable in any project. This new book, edited by Architecture Without Content, a research group at Ecole Polytechnique Federale de Lausanne's School of Architecture, offers a fresh analysis and a thorough re-evaluation of Venturi's idea of "the difficult whole" as both a looking glass and a possible tool for architecture today. Through a radical re-reading of found material from the Venturi Scott Brown archives, the editors seek to propose a credible alternative to contemporary architectural discourse. Its format combines the ambiguity of interpretation with the factual material, keeping the precision of the argument. This elusive position is elaborated in essays, complemented by interviews with Kazunari Sakamoto and Alvaro Siza. Around 35 projects by Venturi Scott Brown, and also by Alvaro Siza and James Stirling, form a visual narrative with original plans and sections and other archive material as well as new perspective images and photographs especially produced for this book.

Continuing the themes that have been addressed in *The Humanities in Architectural Design* and *The Cultural Role of Architecture*, this book illustrates the important role that a contradiction between form and function plays in compositional strategies in architecture. The contradiction between form and function is seen as a device for poetic expression, for the expression of ideas, in architecture. Here the role of the terms "form" and "function" are analyzed throughout the history of architecture and architectural theory, from Vitruvius to the present, with particular emphasis on twentieth-century functionalism. Historical examples are given from Ancient, Classical, Islamic, Christian, Byzantine, Gothic, Renaissance, Mannerist, and Neoclassical architecture, and from movements in the twentieth century to the present. In addition philosophical issues such as lineamenti, Vorstellung, différence, dream construction, deep structure and surface structure, topology theory, self-generation, and immanence are explored in relation to the compositions and writings of architects throughout history. This book contributes to the project of re-establishing architecture as a humanistic discipline, to re-establish an emphasis on the expression of ideas, and on the ethical role of architecture to engage the intellect of the observer and to represent human identity.

Two architectural theorists and designers look back over their influential professional careers, their dedication to broadening the view of the built world, and their iconoclastic vision of the future of architectural design, discovering signs and systems that point forward toward a humane Mannerist architecture.

Pioneering manifesto by founder of "International School." Technical and aesthetic theories, views of industry, economics, relation of form to function, "mass-production split," and much more. Profusely illustrated.

Aldo Rossi, a practicing architect and leader of the Italian architectural movement *La Tendenza*, is also one of the most influential theorists writing today. *The Architecture of the City* is his major work of architectural and urban theory. In part a protest against functionalism and the Modern Movement, in part an attempt to restore the craft of architecture to its position as the only valid object of architectural study, and in part an analysis of the rules and forms of the city's construction, the book has become immensely popular among architects and design students.
