Each book in this series provides a variety of motivating, interactive activities to help young students master concepts and content. The "cut and paste" format allows students to try a variety of possibilities before gluing down their final answers.

This fascinating book will stay with children every time they gaze up at the night sky. Through vivid pictures and engaging explanations, children will learn about many of the Moon's mysteries: what makes it look like a silvery crescent one time and a chalk-white ball a few nights later, why it sometimes appears in the daytime, where it gets its light, and how scientists can predict its shape on your birthday a thousand years from now. Next Time You See the Moon is an ideal way to explain the science behind the shape of the Moon and bring about an evening outing no child—or grown-up—will soon forget. Awaken a sense of wonder in a child with the Next Time You See series from NSTA Kids. The books will inspire elementary-age children to experience the enchantment of everyday phenomena such as sunsets, seashells, fireflies, pill bugs, and more. Free supplementary activities are available on the NSTA website. Especially designed to be experienced with an adult—be it a parent, teacher, or friend—Next Time You See books serve as a reminder that you don't have to look far to find something remarkable in nature.

There was once a little raccoon who wanted to go out in the night -- to know an owl, to see if the moon is a rabbit, and to find out how dark is the dark. But his mother said, "Wait. Wait till the moon is full." So the little raccoon waited and wondered, while the moon got bigger and bigger and bigger. Until at last, on a very special evening, the moon was full.

All around the world people are affected by and in awe of a full moon. In this poetic exploration of the lunar wonder, places near and far provide the backdrop for discovering celebrations, beliefs, customs and facts about the moon. From Broadway to Hong Kong to the International Space Station, the various perspectives, sparkling verses and depth of information create a fascinating rendering of a familiar, yet remarkable sight.

Each module contains experiments and worksheets for teaching one aspect of science on a primary or elementary level.

The Moon wants to kill you. Whether it's being unable to pay your per diem for your allotted food, water, and air, or you just get caught up in a fight between the Moon's ruling corporations, the Five Dragons. You must fight for every inch you want to gain in the Moon's near feudal society. And that is just what Adriana Corta did. As the leader of the Moon's newest "dragon," Adriana has wrested control of the Moon's Helium-3 industry from the Mackenzie Metal corporation and fought to earn her family's new status. Now, at the twilight of her life, Adriana finds her corporation, Corta Helio, surrounded by the many enemies she made during her meteoric rise. If the Corta family is to survive, Adriana's five children must defend their mother's empire from her many enemies... and each other.

Provides the final report of the 9/11 Commission detailing their findings on the September 11 terrorist attacks.

The Universe in Your Hands Project STAR (Science Teaching through its Astronomical Roots) is an astronomy course that also teaches real-world math and physics. Project STAR capitalizes on students' inherent interest in the limitless universe that surrounds them. This second edition uses a new approach that is consistent with the philosophy of the authors: students learn science better by making measurements and observations than by memorizing "facts." Each chapter begins with questions to test preheld views on certain subjects. Students then use measurements and observations to explore the models in the chapters. Questions are sprinkled throughout the book to test understanding along with cartoons to lighten the learning with humor. Hands-on activities play an essential role in this 1-year course. In completing these hands-on activities, students will: make observations of the skies build models use models to explain observations and make predictions find everyday applications for such models The Student Text for Project STAR, Second Edition includes updated information, is easier to use and visually more appealing. The material is laid out with new illustrations for greater clarity and understanding. A color plate section supports activities and text related to the study of spectra. A reference section has also been added. It lists astronomy resources on the web. The Astronomy Explorer CD-ROM is included with the Student Text. This interactive CD-ROM contains movies and animations related to astronomy. The student exercises provide an excellent foundation for understanding the complexities of the universe. A glossary of terms is also part of the CD.
