This textbook covers all the topics teachers want in an algebra curriculum. The curriculum

thoroughly covers all traditional Algebra 1 topics, including work with rational and radical expressions. Optional coverage of proof is also included.

A connection between abstract mathematical concepts and the real world settings is emphasized in this book. It provides analytical, graphical, numerical, and verbal approaches to major topics and includes regular use of graphing utilities where appropriate as well as discussions of the advantages and limitations of technology.

This book provides comprehensive coverage of Intermediate Algebra plus coverage of polynomial and rational functions, sequences, probability and mathematical induction to prepare readers/students for college algebra, precalculus and other "service" math courses. The material is presented in an interesting and inviting format that utilizes "real world" data and encourages modeling, critical thinking and problem solving.

Elayn Martin-Gay's success as a developmental math author starts with a strong focus on mastering the basics through well-written explanations, innovative pedagogy and a meaningful, integrated program of learning resources. The revisions to this edition provide new pedagogy and resources to build reader confidence and help readers develop basic skills and understand concepts. Features incorporation of AMATYC and NCTM standards-reflected in an increased emphasis on visualization graphing, and data analysis. In addition, Martin-Gay's 4-step problem solving process-Understand, Translate, Solve and Interpret-is integrated throughout. Also includes new features such as Study Skills Reminders, "Integrated Reviews", and "Concept Checks." For those in need of a graphing utility resource in intermediate algebra, and for readers who need to prepare for advanced algebra or finite math.

Contains three sample SAT math reasoning tests with explanations, coverage of all required math concepts, and test-taking strategies.
