Montessori Discovery Of The Child Chapter 6 Summary. 2. What are the discoveries of Dr. Maria Montessori? Dr. Maria Montessori was a keen observer of children. She used her observational and experimental proclivities from her medical background to develop, what we might today call, a Constructivist understanding of the process of learning. She studied them scientifically.

The Discovery Of The Child : Maria Montessori : Free ...

Children have an inbuilt drive for discovery. Encourage your child to observe the world and to feel a sense of wonder for everything in it. Maria Montessori believed that all children behave like “little scientists” in that they are eager to observe and make “what if” discoveries about their world.

Children, And Applied In Montessori Schools Throughout The World. She Opened The First Montessori School For Children In The Slums Of Rome In 1907.

Three-year old Emily greets her grandfather at the front door: “We’re having a surprise party for your birthday! And it’s a secret!” We may smile at incidents like these, but they illustrate the beginning of an important transition in children’s lives—their development of a “theory of mind.” Emily certainly has some sense of her grandfather’s feelings, but she clearly doesn’t understand much about what he knows, and surprises—like secrets, tricks, and ties all depend on

understanding and manipulating what others think and know. Jean Piaget investigated children's discovery of the mind in the 1920s and concluded that they had little understanding before the age of six. But over the last twenty years, researchers have begun to challenge his methods and revise his conclusions. In *The Child's Discovery of the Mind*, Janet Astington surveys this lively area of research in developmental psychology. Sometime between the ages of two and five, children begin to have insights into their own mental life and those of others. They begin to understand mental representation—that there is a difference between thoughts in the mind and things in the world, between thinking about eating a cookie and eating a cookie. This breakthrough reflects their emerging capacity to infer other people's

thoughts, wants, feelings, and perceptions from words and actions. They come to understand why people act the way they do and can predict how they will act in the future, so that by the age of five, they are knowing participants in social interaction. Astington highlights how crucial children's discovery of the mind is in their social and intellectual development by including a chapter on autistic children, who fail to make this breakthrough. "Mind" is a cultural construct that children discover as they acquire the language and social practices of their culture, enabling them to make sense of the world. Astington provides a valuable overview of current research and of the consequences of this discovery for intellectual and social development.

Routledge is now re-issuing this prestigious series of 204 volumes originally published between 1910 and 1965. The titles include works by key figures such as C.G. Jung, Sigmund Freud, Jean Piaget, Otto Rank, James Hillman, Erich Fromm, Karen Horney and Susan Isaacs. Each volume is available on its own, as part of a themed mini-set, or as part of a specially-priced 204-volume set. A brochure listing each title in the "International Library of Psychology" series is

Dr. Whitfield provides a clear and effective introduction to the basic principles of recovery. This book is a modern classic, as fresh and useful today as it was more than a decade ago when first published. Here, frontline physician and therapist Charles Whitfield describes the process of wounding that the Child Within (True Self) experiences and shows how to differentiate the True Self from the false self. He also describes the core issues of recovery and more. Other writings on this topic have come and gone, while Healing the
