utility distribution system operations. In addition, changing uses and use patterns for electricity—from plug-in electric vehicles (EVs) to demand response (DR)—are altering demands placed on the electric power system. Finally, the infusion of new information and communications technology (ICT) into the electric system and its markets is enabling the collection of immense volumes of data on power sector operations and use; unprecedented control of generation, networks, and loads; and new opportunities for the delivery of energy services. In this Special Issue of Energies, research papers on topics related to the integration of distributed energy resources (DG, DS, EV, and DR) are included. From technologies to software tools to system-wide evaluations, the impacts of all aforementioned distributed resources on

learner improvement cycle. Common moral purpose is driven by beliefs and behaviors that support all learners to proficiency. These beliefs/behaviors include creating a school ' s culture to be ready-to- change, trust one another to doubt current practices, and develop collective efficacy. This new culture supports the components of the learner improvement cycle (assessment, evaluation, planning, and learning) involving the learners in each step. Updates include tools and processes to assist the readers in implementation. Directions, templates, and examples assist in realizing the future of public education. Public schools must awaken to a new reality. Additional key features of this updated edition include: Explore a new model that empowers learners in their education Evolve through a developmental continua to
