An inspiring instructional handbook for transforming idealism into social change The pursuit of freedom and justice is a timeless one, but new activists may not know where to begin, while more experienced ones often become jaded or fatigued. The task of constructing a new society, free from oppression and inequality, can be overwhelming. Tools for facilitating motivation, engagement, and communication can mean the difference between failure and success for activists and social movements. Educating for Action collects the voices of activists whose combined experience in confronting injustice has generated a wealth of key insights for creating social change. This

practical guide explores such topics as: Community activism and direct democracy Conflict negotiation, communication, and rhetoric Law, the educational system, and lifestyle activism Social media skills, conference planning, and online organizing Written in an inspirational tone, *Educating for Action* consciously straddles the line between street activism and classroom instruction. Bridging the gap between these two worlds makes for an engaging and instructive manual for social justice, helping students, teachers, and larger activist communities turn their idealism into action. Jason Del Gandio is a scholar-activist and assistant professor of rhetoric and public advocacy at Temple University. He is the author of *Rhetoric for Radicals: A Handbook for 21st Century Activists*. Anthony J. Nocella II is a scholar-activist and senior fellow of the Dispute Resolution Institute at the Hamline Law School. He is a long-time anti-racism, youth justice, prison abolition, hip hop, animal, disability, and Earth liberation activist and has published over fifty scholarly articles and book chapters and sixteen books.

Predictions about future effects of climate change range from mild to dire – but we're already seeing warmer winters, hotter summers, and more extreme storms. Proposed solutions often seem expensive and complex, and can leave us as individuals at a loss, wondering what, if anything, can be done. Sue Reed and Ginny Stibolt offer a rallying cry in response – instead of wringing our hands, let 's roll up our sleeves. Based on decades of experience, this book is packed with simple, practical steps anyone can take to beautify any landscape or garden, while helping protect the planet and the species that call it home. Topics include: Working actively to shrink our carbon footprint through mindful landscaping and gardening Creating cleaner air and water Increasing physical comfort during hotter seasons Supporting birds, butterflies, pollinators, and other wildlife. This book is the ideal tool for homeowners, gardeners, and landscape professionals who want to be part of the solution to climate change. Sue Reed is a registered Landscape Architect with thirty years' experience designing ecologically rich, energy efficient, and climate-responsive landscapes. She served as adjunct faculty at the Conway School of Landscape Design, and has led numerous workshops on ecological landscaping. Sue is the author of *Energy-Wise Landscape Design*. Ginny Stibolt has an MS degree in Botany from the University of Maryland, and moved to Florida in 2004. She is co-manager of the Florida Native Plant Society Facebook page, where she works to educate Floridians on authentic Florida landscapes.

**#1 NEW YORK TIMES BEST SELLER** • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering,

political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

A Planning Guide for Developing Zero Energy Communities (also called The ZEC Guide) helps developers, corporations, institutions, governments, utility companies, and communities create cities, campuses, and neighborhoods that, by design, conserve energy and incorporate electric vehicle charging using renewable energy to power those buildings and vehicles. ZECs provide a net balance of the supply and demand for local energy based on the National Renewable Energy Laboratories' (NREL) ZEC definition. The ZEC Guide addresses both Greenfield and Retrofit ZECs of various project sizes and complexities. The environmental impacts, regulatory issues, resistance, and economics are described. The ZEC Guide includes an extensive primer regarding renewable energy, control systems, energy storage, and hybridization of technologies. The guide provides a step-by-step process for evaluation and implementation and an explanation of how to create a ZEC program and align it with other sustainability and green building standards. Extensive references are provided for a multitude of relevant resources. The 202-page book includes forty-two photos and illustrations.

What can we do, right now, in our own landscapes, to help solve climate change?
