This book attempts to provide an overview of social and political changes in Chinese society since the global financial crisis. Rapid economic development has restructured the setup of society and empowered or weakened certain social players. The chapters in this book provide an updated account of a wide range of social changes, including the rise of the middle class and private entrepreneurs, the declining social status of the working class, as well as the resurgence of non-governmental organisations and the growing political mobilisation on the internet. The authors also examine the implications of those changes for state-society relations, governance, democratic prospects, and potentially for the stability of the current political regime.

Rockets were invented in China, the home of many modern inventions, including ancient astronomy, and were used originally for military purposes in the 13th century. The Chinese space program was founded in October 1956 by the father of Chinese rocketry, Tsien Hsue Shen, who lived in California in the 1930s until his expulsion as a Chinese spy. In recent times there have been three manned spaceflights, highlighting China ' s ambitious space program and generating worldwide interest. Future missions are planned, including a mission to go to Mars. The explosive growth of China ' s innovative and rapidly developing space program in recent years has made it a "hot" topic in international space policy. This follow up to Harvey's earlier book, China's Space Program - From Conception To Manned Spaceflight (2004) bring us up to date with everything that is happening in the Chinese space program today and looks at its ambitious future. The author briefly summarizes how this program evolved from medieval times, and uncovers the truth behind the bland, unreliable, and generally uninformative news releases issued around each space mission. It also examines the key features of the program, previously unknown to the outside world.
