The book in its tenth edition has been thoroughly restructured and revised. All the chapters of the present edition have been re-written not only to incorporate the latest developments in management but also to make presentation of subject-matter more lucid and crisp. Chapter 3 of the previous edition (Managers and Environment) has been named as Management Challenges and Opportunities in the present edition so that proper focus is put on these issues. Thus, the present edition is ideally suited to management students as well as management practitioners, particularly those who have not gone through formal management education.

The principal difference that this book would make to any literate young mind above 17 is its non-textbook flavour. Once the young reader discovers the uniqueness of the book, an exhilarating journey would begin. The book begins by highlighting the challenges that an individual has to face to be successful in life. The emphasis then shifts to the bottlenecks that need to be overcome for a better change. The underlying theme that is evident throughout the book is that although enervating, the challenges we face are unavoidable as smooth seas skillful sailors do not make. The book successfully converts what the students have to study into a flexible curriculum. The chapters reverberate with lateral thinking infused with ideas on the skills and values that they will have to gather in order to shape the 21st century. This book is innovative and works as a platform between intersecting ideas, and helps the youth to toil towards a better change syndrome. The book exudes a set of distinctive styles that effectively connects with the potential energy of young Indians. The greatest managers of any society are parents and teachers. The book's approach connects with all mobile human talent to understand the emerging trends and commit ourselves to a better and positively more beautiful place to live in with

Surface Mount Technology is not a technology of tommorrow but a technology of today. It provides a quantum jump in the packaging tech nology to produce state-of-the-art miniaturized electronic products. How ever, in order to take advantage of this technology, a complete infrastruc ture must be put in place. This requires considerable investment in human and capital resources. Intel corporation has made these investments to keep its customers for components and systems on the leading edge of technology. Based on the experience of putting this infrastructure in place for system products, this book is written for managers who need to manage the risk during its implementation, and the practicing engineers who need to improve the design and manufacturing processes for improved yield and cost reduction. To accomplish this task, I have not only culled the infor mation from published materials, but have also depended on input from both my colleagues in Intel and such outside organizations as the Institute of interconnecting and Packaging electronic Circuits (IPC) , the Electronics Industries Association (EIA), and the Surface Mount Council. But the underlying basis for this book has been my first-hand experience in im plementing this technology for Intel Systems Group and my experience at Boeing, my previous employer. In a fast-changing technology like SMT, it is very easy to have obsolete information even before the book is published. For this reason, I have concentrated on the basic principles and practice of the technology.

This book is meant for students of accounting, management and business studies. It not only describes the principles, procedures and techniques of management accounting, but also explains and analyses the core concepts that have driven the development of the subject for decades.
