China business experts analyze the next wave of Chinese corporate giants as they emerge into the global marketplace The rise of China and its major corporations will be a key economic development in this century. Even as leading Chinese firms show their muscle through ambitious acquisitions of firms like Thinkpad and RCA, many western investors and business leaders know little or nothing about them. This book looks at the rise of Chinese firms, who they are, how they'll change the global competitive landscape, their strengths and weaknesses, and how established western firms might meet the challenges and opportunities this trend presents. Throughout the book, the authors examine and highlight the major differences between Chinese and western firms, particularly differences related to corporate leadership and organizational structure, how and why they choose M&A targets, global workforces, and political issues like unionization. A comprehensive, expert examination of emerging Chinese global corporations and how they will affect the global economy Ideal for investors and executives of western companies Written by a team of top China business experts and curated by the editor of the Chinese edition of the Harvard Business Review For anyone who wants to understand the future of Chinese companies and the opportunities and challenges their global emergence will present, The Globalization of Chinese Companies offers comprehensive, expert insight.

Authors from a variety of disciplines discuss practices mediated through mobile communication, including current phone and tablet devices. The converging concepts of Materialities (ranging from the political economy of communication to physical devices) and Imaginaries (including cultural values, desires and perceptions) are touchstones for each of the chapters in the book.

A diario adquirimos bienes y servicios, celebramos contratos, nos relacionamos, compartimos ideas, desde lugares separados por miles de kilómetros. El ciberespacio se ha integrado a la sociedad y junto con el Cibercriminología (sustitución de identidad, hostigamiento escolar virtual [bullying]), requiere cada vez más la intervención de una nueva disciplina criminalística: La informática forense. Una tarea multidisciplinaria, que integra al derecho, la informática y la criminalística en un esfuerzo transdisciplinario, que intenta brindar solución a la reconstrucción del hecho real o virtual. La informática forense es a la informática, lo que la medicina legal es a la medicina. El Lugar del Hecho Virtual es al Lugar del Hecho Real, lo que la Realidad Virtual es a la Realidad. La Prueba Documental Informática es una especie del género Prueba Documental Clásica (Foliográfica, Bibliográfica y Pictográfica). El Prof. Ing. Arellano González, director del Curso de Informática Forense de UTN FRA (desarrollo teórico-conceptual) y la Ing. María Elena Darahuge (práctica-procedimental) se unen en esta obra para presentar un libro de aplicación directa a la Problemática Informático Forense, incluyendo los aspectos científicos, tecnológicos, técnicos y en particular los procesales. Una obra imprescindible para los operadores del Derecho (jueces, funcionarios judiciales, abogados de la matrícula), ingenieros, licenciados y peritos en Informática, Sistemas o Computación, licenciados en Criminalística, profesionales y empresarios que deseen obtener una visión clara y sencilla de la problemática informático-forense, utilizarla para resolver problemas cotidianos y brindar soporte a sus decisiones.

Affect and emotion play an important role in our everyday lives: They are present whatever we do, wherever we are, and wherever we go, without us being aware of them for much of the time. When it comes to interaction, be it with humans, technology, or humans via technology, we suddenly become more aware of emotion, either by seeing the other's emotional expression, or by not getting an emotional response while anticipating one. Given this, it seems only sensible to explore affect and emotion in human-computer interaction, to investigate the underlying principles, to study the role they play, to develop methods to quantify them, and to finally build applications that make use of them. This is the research field for which, over ten years ago, Rosalind Picard coined the phrase "affective computing". The present book provides an account of the latest work on a variety of aspects related to affect and emotion in human-technology interaction. It covers theoretical issues, user experience and design aspects as well as sensing issues, and reports on a number of affective applications that have been developed in recent years.

How have smartphones shaped the way we socialize and interact? Who tracks our actions, our preferences, our movements as recorded by our smartphones? These are just some of the questions that journalist Elizabeth Woyke answers in this muckraking expose.
