This publication provides an overview of the importing process and contains general

information about import requirements. This edition contains much new and revised material brought about because of changes in the law, particularly the Customs Modernization Act. The Customs modernization provisions has fundamentally altered the process by shifting to the importer the legal responsibility for declaring the value, classification, and rate of duty applicable to entered merchandise. Chapters cover entry of goods, informed compliance, invoices, assessment of duty, classification and value, marking, special requirements for alcoholic beverages, motor vehicles and boats, import quotas, fraud, and foreign trade zones. In addition to the material provided by the U. S. Customs Service, the private commercial publisher of this book has provided a bonus chapter on how to build a tax-free import-export business.

Figural and non-figural supports are a ubiquitous feature of Roman marble sculpture; they appear in sculptures ranging in size from miniature to colossal and of all levels of quality. At odds with modern ideas about beauty, completeness, and visual congruence, these elements, especially non-figural struts, have been dismissed by scholars as mere safeguards for production and transport. However, close examination of these features reveals the tastes and expectations of those who commissioned, bought, and displayed marble sculptures throughout the Mediterranean in the Hellenistic and Roman periods. Drawing on a large body of examples, Greek and Latin literary sources, and modern theories of visual culture, this study constitutes the first comprehensive investigation of non-figural supports in Roman sculpture. The book overturns previous conceptions of Roman visual values and traditions and challenges our understanding of the Roman reception of Greek art.

The rapid conversion of land to urban and suburban areas has profoundly altered how water flows during and following storm events, putting higher volumes of water and more pollutants into the nation's rivers, lakes, and estuaries. These changes have degraded water quality and habitat in virtually every urban stream system. The Clean Water Act regulatory framework for addressing sewage and industrial wastes is not well suited to the more difficult problem of stormwater discharges. This book calls for an entirely new permitting structure that would put authority and accountability for stormwater discharges at the municipal level. A number of additional actions, such as conserving natural areas, reducing hard surface cover (e.g., roads and parking lots), and retrofitting urban areas with features that hold and treat

stormwater, are recommended.
