Observation is one of the foundational methods of qualitative inquiry—but only if it is conducted in a systematic fashion that allows for the careful recording of data and the consistent retrieval of those data for purposes of analysis. To that end, this book features a brief how-to guide to conducting observations in naturalistic settings. The history of observational research, ongoing questions of its epistemological status, the impact of new technologies, and its major ethical concerns are also treated. Replete with examples of observation-based research, questions for class discussion, a glossary, and extensive references, this volume offers a rapid fire start into doing naturalistic observational research for novices and students.

Progress in Behavior Modification, Volume 9 covers the developments in the study of behavior modification. The book discusses the future of behavior therapy; an examination of the rationale and treatment effectiveness of overcorrection; and the therapeutic innovations and emerging conceptual challenges in the behavioral treatment of test anxiety. The text also describes the conceptual and empirical status of rational-emotive therapy; the behavior modification procedures for training chronically institutionalized schizophrenics; and the behavior modification of the elderly. The behavioral assessment and training of children's social skills are also considered. Psychologists, psychiatrists, and educators will find the book invaluable.

The purpose of this book is to provide readers with sufficient knowledge regarding social skills assessment and training with children so that they can implement and evaluate social skills programs on their own. Increased interest in promoting children's social skills has stemmed in part from advances in research that have shown the importance of childhood social competency for adjustment in both childhood and adulthood. There is a growing need for assessment and training methods that can be utilized by diverse groups of professionals and paraprofessionals. This book is intended for mental health workers, teachers, educators, clinicians, and child-care personnel. The book thoroughly reviews the literature to acquaint readers with relevant findings on social skills and to provide discussion regarding contemporary issues and assessment techniques. Subsequently, comprehensive procedures in the training of children's social skills are presented. Readers are also provided with 16 detailed training modules, each of which comprises a rationale, instructions, Scripts, and homework assignments. These modules are designed to permit effective implementation of social skills training programs. Moreover, they provide a structured and programmatically designed format that builds in clinical flexibility for their use with individual children or groups of children. These modules are followed by a clinical-issues section designed to address potential obstacles to effective training. Following these major sections, two appendixes have been included in the book. The first appendix is a step-by-step description of how to conduct an assessment.

This Comprehensive book for the UGC NET (Social Work Optional) is based on the prescribed syllabus and is based on a judicious mix of the theory and practice questions.
