Engineering Drawing with CAD Applications is ideal for any engineering student, needing a user-friendly step-by-step guide to draughting, sketching and drawing. Fully revised to take into account developments in computer aided drawing, and to keep up with British Standards, this guide remains an ideal introduction to the subject. It provides readers with the basic knowledge and skills of draughting and takes them on to more interesting and advanced engineering drawing techniques and procedures. This latest revision of Ostrowsky's popular Engineering Drawing represents a comprehensive introductory course in engineering drawing and sketching, and is suitable for a wide range of college and university engineering students. The author concentrates on the techniques fundamental to effective drawing, key knowledge that is needed whether the drawings are carried out by hand, or via a CAD package. Copious illustrations and a clear, step-by-step approach make this book ideal for distance learning and assignment-based study.

Salient Features: Provided simple step by step explanations to motivate self study of the subject. Free hand sketching techniques are provided. Worksheets for free hand practice are provided. A new chapter on Computer Aided Design and Drawing (CADD) is added.

The relationships between knowledge, technologies, and legal processes are central to the constitution of contemporary societies. As such, they have come to provide the focus for a range of academic projects, across interdisciplinary legal studies and the social sciences. The domains of medical law and ethics, intellectual property law, environmental law and criminal law are just some of those within which the pervasive place and "impact" of technoscience is immediately apparent. At the same time, social scientists investigating the making of technology and expertise - in particular, scholars working within the tradition of science and technology studies - frequently interrogate how regulation and legal processes, and the making of knowledge and technologies, are intermingled in complex ways that come to shape and define each other. This book charts the important interface between studies of law, science and society, as explored from the perspectives of socio-legal studies and the increasingly influential field of science and technology studies. It brings together scholars from both areas to interrogate the joint roles of law and science in the construction and stabilization of socio-technical networks, objects, and standards, as well as their place in the production of contemporary social realities and subjectivities.
