makes by model, factory photos, and up-to-date vehicle pricing. The I-to-conditional pricing system assures readers of accurate values, whether a vehicle is a #1 low-mileage, rust-free beauty or a #6 parts-only heap. "Techs & specs", original factory prices, production and serial numbers, and engine/chassis codes are noted by model, thus helping you determine authenticity accuracy. Historical, technical and pricing information are combined from hundreds of sources. James Flammang values each model according to the popular 1-6 grading system invented by Old Cars magazine.

This introductory paperback takes an informal approach to introducing "allowable stress" structures to users who need to understand basic structures but don't necessarily plan to become engineers. The book does not cover calculus and complex theory yet provides students with the understanding of the fundamental structural concepts required of their respective professions. The book features nearly 400 high-quality graphics that help users grasp key concepts. This can be used as a professional resource for construction managers, architects, or anyone interested in construction technology.

Offers unified treatment of conventional and modern continuous and discrete control theory and demonstrates how to apply the theory to realistic control system design problems. Along with linear and nonlinear, digital and optimal control systems, it presents four case studies of actual designs. The majority of solutions contained in the book and the problems at the ends of the chapters were generated using the commercial software package, MATLAB, and
