Annual Report 2015/16 | Part A: General Information 7 3. FOREWORD BY THE MINISTER DR IVAN MEYER MINISTER OF FINANCE DATE: 31 August 2016 In terms of Section 65 of the Public Finance Management Act No. 1 of 1999 I hereby table the Western Cape Provincial Treasury's Annual Report for the 2015/16 financial year for deliberation in the Western Cape

Disasters present a broad range of human, social, financial, economic and environmental impacts, with potentially long-lasting effects. This report applies the lessons from the OECD's analysis of disaster risk financing practices and its risk guidance to the specific case of floods.

This book provides insight on how disaster risk management can increase the resilience of society to various natural hazards. The multi-dimensionality of resilience and the various different perspectives in regards to disaster risk reduction are taken explicitly into account by providing studies and approaches on different scales and ranging from natural science based methods to social science frameworks. For all chapters, special emphasis is placed on implementation aspects and specifically in regards to the targets and priorities for action laid out in the Sendai Framework for Disaster Risk Reduction. The chapters provide also a starting point for interested readers on specific issues of resilience and therefore include extensive reference material and important future directions for research.

As risk-taking is an essential part of the banking industry, banks must practise efficient risk management to ensure survival in uncertain financial climates. Banking operations are specifically affected by fluctuations in interest rates which cause financial imbalance; thus banks are now required to put in place an effective management structure that incorporates risk management efficiency measures that help mitigate the wide range of risks they face. In this book, the authors have developed a new modelling approach to determine banks' financial risk management by offering detailed insights into the integrated approach of dollar-offset ratio and Data Envelopment Analysis (DEA), based on derivatives usage. It further analyses the efficiency measurement under stochastic DEA approaches, namely (i) Bootstrap DEA (BDEA), (ii) Sensitivity Analysis and (iii) Chance-Constrained DEA (CCDEA). As demonstrated in the modelling exercise, this integrated approach can be applied to other cases that require risk management efficiency measurement strategies. Additionally, this is the first book to comprehensively review the derivative markets of both the developed and developing countries in the Asia-Pacific region, by examining the differences of risk management efficiency of the banking institutions in these countries. Based on this measurement approach, strategies are provided for banks to improve their strategic risk management practices, as well as to reduce the impacts from external risks, such as changes in interest rates and exchange rates. Furthermore, this book will help banks to keep abreast of recent developments in the field of efficiency studies in management accounting, specifically in relation to hedge accounting, used by banks in the Asia-Pacific region.

Strategic Financial Management Casebook strategically uses integrative case studies—cases that do not emphasize specific subjects such as capital budgeting or value based management—to provide a framework for understanding strategic financial management. By featuring holistic presentations, the book puts readers into the shoes of those responsible for the world's largest wealth creators. It covers strategies of growth, mergers and acquisitions, financial performance analysis over the past decade, wealth created in terms of stock returns since its listing in stock market, investment and financial decisions, cost of capital, and corporate valuation. In addition, the casebook also discusses corporate restructuring activities undertaken by each company. Each chapter follows a template to facilitate learning, and each features an Excel-based case analysis worksheet that includes a complete data set for financial analysis and valuation. Introduces a conceptual framework for integrating strategy and finance for value creation Emphasizes the roles of corporate governance, corporate social responsibility, and risk management in value creation Encourages an analysis of investment, financing, and dividend decisions Examines non-financial factors that contribute to value

Through a synthesis of a broader inter-disciplinary literature in the field of disaster studies, organisation theory and management, and an in-depth case study this book provides an analytical framework for organising post-disaster reconstruction programmes which aim to reduce future disaster risks and achieve other objectives. It explores the role of organisational design and management on approaching and achieving the objectives of the reconstruction programme in Iran after the 2003 Bam earthquake. The housing reconstruction programme in Bam was a complex case, offering various learning opportunities to understand organising reconstruction processes especially in urban areas. The case study research explores how the urban housing reconstruction programme system was formed purposefully towards the delivery of the stated objectives and created an innovative housing process throughout the urban area. It identifies consistencies and inconsistencies among the influential organisational attributes of the programme delivery system formation. The system evolved through corrective adjustments (either formally or informally) during its implementation to reflect unfolding consequences of inconsistencies in initial formation and emerging contextual issues in the field.
