Author Steve Magnante is well known for his encyclopedia-like knowledge of automotive facts. The details he regularly shares, both in the pages of national magazines and as a contributing host and tech expert at the popular Barrett-Jackson Auctions on television, are the kinds of details that car fanatics love to hear. Many feel that these facts are among the highlights of television auction coverage, much more interesting than the final hammer price. Steve turns his attention to the most popular car in history, the Ford Mustang. In more than 50 years, the Mustang has taken many turns, from the original pony car, to variants that are best described as pure muscle cars, to the misunderstood Mustang II, to the Fox-Body platform that revived the brand, all the way to the modern Coyote- and Voodoo-powered supercars. Magnante covers them all here, generation by generation, so that Mustang fans of any generation are sure to love this collection. Whether you're an avid fan of all Mustangs, a trivia buff who wants to stump your friends, or have a particular affinity for a particular era of Mustangs, this book is an informative and entertaining collection of facts from one of the industry's most beloved and respected sources. Add this copy to your collection today.

A Companion to Theodore Roosevelt is the first comprehensive anthology to encompass Roosevelt as whole, highlighting both his personality and his skilled diplomacy. Revitalizes and internationalizes scholarship on this most popular and highly-rated American president Covers many aspects of Roosevelt ' s personality and his policies, domestic and foreign, to create a complete picture of the man Provides scholarship from both sides of the Atlantic, from established Roosevelt specialists, respected scholars, and a new generation of historians A new and fresh historiographical exploration of Roosevelt ' s life and ideas, political career and achievements, and his legacies

Detailing is an essential part of the design process. This thorough reference guide for the design of reinforced concrete structures is largely based on Eurocode 2 (EC2), plus other European design standards such as Eurocode 8 (EC8), where appropriate. With its large format, double-page spread layout, this book systematically details 213 structural

The history of hot rodding and performance cars has been well chronicled through the years. Books and magazines have covered the cars, builders, pioneers, engineers, early racers, muscle cars, street racers, etc. Most take a nostalgic and fun look at the cars that many have loved their entire lives. Some even cover the lifestyle, the hobby as it involves people, and the effort, time, and commitment people put into it. It is more than just a hobby to most, and to many, a certain wave of nostalgia comes over them when remembering what the car scene was like "back in the day." The local speed shop is an important element of the nostalgic feeling that people have when fondly remembering their hot rodding youth. Speed shops were not just parts stores, they were a communal gathering place for car guys wanting to talk smart, bench race, and catch up on the local scene, as well as to solicit the expert advice from the owner or staff behind the counter. Here, longtime hot rodder and industry veteran Bob McClurg brings you the story of the era and the culture of speed shops as told through individual shop's histories and compelling vintage photography. He covers the birth of the industry, racing versus hot rodding, mail-order, and advertising wars. You learn about the performance boom of the 1960s and 1970s, lost speed shops as well as survivors, and a overview of the giant mail-order speed shops of today.

Explore clean vehicles that are becoming available and affordable including electric vehicles, plug-in hybrids, hydrogen vehicles, and new cars with great mileage. "Paul Comfort is our industry's leader on what's coming next for mobility. After a thirty year career in public transportation operations and executive leadership, he now travels the globe hearing directly from our top CEOs on what's working, what's not and what's next. If anyone can pull together a compendium on the Future of Public Transportation, it's Paul and he's done so in this book. Congrats!" - Erinn Pinkerton, President and CEO of BC Transit. "With Paul's long and distinguished career in transportation as well as his current involvement in mobility through his podcast Transit Unplugged and other thought leadership, Paul is uniquely positioned to provide a clear eyed and expert view on the future of public transportation and what we as concerned stakeholders should be thinking about." -Blair Schlecter, VP of Economic Development and Govt. Affairs, Beverly Hills Chamber of Commerce "As a 38 year public transportation industry veteran, and former CEO and Chair of APTA, I can say that technology and mobility is adapting faster than ever to societal demands and technological abilities. Paul Comfort has his finger on the pulse of these fast changing developments and has pulled together for this book a top notch roster of executives from the public and private sector to provide their input." -Peter Varga, Former Chair American Public Transportation Association (APTA). This new book "The Future of Public Transportation" is written by transit industry leader Paul Comfort and over forty top public transport leaders, CEOs, futurists and associations. The book examines the transformations coming this decade for cities and the public transportation systems that serve them allowing readers to become more informed and ready for these changes. In the next few years technology enhancements will produce and expand game changing new mobility options such as autonomous vehicles on regular bus routes and Mobility-as-a-Service (MaaS) smart phone apps allowing passengers to plan, pay for and subscribe to a full menu of traditional public transit and private microtransit options for their travel. Cities will further regulate and optimize the rampant expansion of e-bikes and e-scooters. Mobile public transit fare paying options will expand including allowing the use of not only cell phone and tap and go credit cards but even wearable fare payment jewelry and watches. Traditional transit systems are rebooting their bus networks, adding in high frequency routes & reducing the friction that slows their buses by adding bus only lanes, transit signal priority

(TSP) and electronic fare payment systems. TNCs have now entered the public mobility marketplace and are supplementing or replacing public transit services for many. Transit fleets are becoming greener shifting to zero emission fuels like electric or hydrogen, large multi-national firms are transforming how we build and operate new rail and other capital projects through Public Private Partnerships (P3). Hyperloop and air taxis are looking more like science than fiction. Cities are becoming "smart" and eliminating traffic in the public square or charging for its usage in peak times. Most transit software is moving to the cloud and privately-owned electric automobiles could be the autonomous taxicabs of tomorrow. All these trends & innovations in technology and business models are explored in depth in this book with the collaboration of thought leaders, industry associations, CEOs and the major companies that are creating and utilizing them. In the end, bold leaders will take us to new horizons as they always have, but they will do so using modern technology to move us in ways we never thought possible, and in the process, eliminate barriers that have too long stood in the way of true mobility for all. And THAT is the Future of Public Transportation.

Solomon Northup was born a free black man. He was kidnapped, tortured, and sold into slavery. For 12 years, he was kept in bondage as a slave in Louisiana--Twelve Years a Slave is his moving and raw account of survival and life as a slave.
