Why do you look like your parents? Why do you have blue eyes when your best friend has brown eyes? Genetics can give you the answers. Genetics explains how traits from parents get passed down to their children. Scientists hope to cure many diseases and make healthier food using genetics. Find out how genetics holds the code to what makes you the way you are. Genetics is part of the Super Science Facts series that engages readers in grades 5 to 12 with fun science facts and colorful images on every page to support comprehension. The series covers Physical Science, Life Science and Social Sciences in individual sets. The minimal-text format (1,700 to 2,000 words per book) introduces content vocabulary defined in context and repeated in a glossary.

This book consolidates contemporary thinking and research efforts in teaching and learning about the nature of science in science education. The term 'Nature of Science' (NoS) has appeared in the science education literature for many decades. While there is still a controversy among science educators about what constitutes NoS, educators are unanimous in acknowledging the importance of this topic as well as the need to make it explicit in teaching science. The general consensus is that the nature of science is an intricate and multifaceted theme that requires continued scholarship. Recent analysis of research trends in science education indicates that investigation of the nature of science continues to be one of the most prevalent topics in academic publications. Advances in Nature of Science Research explores teaching and assessing the nature of science as a means of addressing and solving problems in conceptual change, developing positive attitudes toward science, promoting thinking habits, advancing inquiry skills and preparing citizens literate in science and technology. The book brings together prominent scholars in the field to share their cutting-edge knowledge about the place of the nature of science in science teaching and learning contexts. The chapters explore theoretical frameworks, new directions and changing practices from intervention studies, discourse analyses, classroom-based investigations, anthropological observations, and design-based research.

Middle school and high school students hear about the theory of evolution numerous times throughout their public educations. Science textbooks teach Darwinism virtually without question despite the growing lack of evidence. The full-color glossy Answers to Evolution pamphlet gives students dozens of quotes from respected scientists to help refute the evolutionary theory, and showing that even Darwin believed it could be flawed and wouldn't hold up against a preponderance of scientific evidence. This bestselling 12-panel pamphlet is easy-to-understand and teaches youth to understand and respectfully address errors in Darwinism. The Answers to Evolution pamphlet is a powerful tool to help young students to develop arguments that refute the evolution and Big Bang theory, among others. Using quotes and information from respected scientists, the pamphlet tackles 16 key questions regarding the theory of evolution and provides students with insight on the flaws of the theories. Here are a few of the 16 questions the pamphlet asks and answers:

- Is Darwin's theory of evolution a fact?
- Does the fossil record support Darwin's theory?
- What is the Big Bang Theory? The pamphlet also offers clear explanations on topics such as:
 - Selective breeding
 - Microevolution vs. macroevolution
 - Punctuated equilibrium
 - The Cambrian Explosion

Answers to Evolutions helps Christian and Creationist communities take an informed position against evolutionary theories. Respected scientists offer solid Answers to Evolution in this pamphlet. Their answers to these 16 questions reveal the gaps and holes in evolution theories:

- Is Darwin's Theory of Evolution a fact?
- Is there any proof that evolution happened?
- What is the Big Bang Theory?
- Is the Big Bang Theory good news or bad news for the theory of evolution
- Can molecules of non-living matter be transformed by a natural process into the organic building blocks of life (proteins)?
- Does the Miller-Urey experiment prove that organic life can be built by a natural process?
- Do all scientists accept Darwin's theory of evolution at the cell level?
- Do the changes in Galapagos finch beaks, or changes caused through selective breeding, prove that evolution takes place?
- Does the fossil record support Darwin's theory?
- What is the "Cambrian Explosion" and does it prove Darwin's theory?
- Was there a gradual transition of an ape to man or the Eohippus (primordial horse) to the modern horse?
- What is punctuated equilibrium and does it solve the problem of "missing links"?
