Advances in Research on the Strength and Fracture of Materials: Volume 4-Fracture and Society contains the proceedings of the Fourth International Conference on Fracture, held at the University of Waterloo, Canada, in June 1977. The papers review the social implications of fracture in a wide range of materials, with emphasis on education and politics. This volume is comprised of 22 chapters and opens by discussing fracture and fracture mechanics before introducing the reader to fracture problems in nuclear reactors; plastic flow around a crack under friction and combined stress; crack closure in fatigue crack growth; and the effect of the atomic structure's discreteness on cleavage crack extension in brittle materials. The following chapters explore the physical nature of fracture in composite materials; political and social decision making in relation to fracture, failure, risk analysis, and safe design; and the teaching of fracture in universities. This monograph will be a useful resource for

Advances in Research on the Strength and Fracture of Materials: Volume 3Bs—Applications and Non-Metals contains the proceedings of the Fourth International Conference on Fracture, held at the University of Waterloo, Canada, in June 1977. The papers review the state of the art with respect to testing of fracture in a wide range of non-metals such as ceramics, glass, composites, polymers, biomaterials, and concrete. This volume is divided into five sections and opens by discussing the role of acoustic emission in fracture toughness testing and the relation between static and dynamic fracture toughness of structural steels. The reader is then introduced to methods for determining stress-intensity factors of simplified geometries of structural parts; stress analysis of pressure vessels by thermal shock; the fracture toughness of constructional steels in cyclic loading; and fracture processes and fracture toughness in powder forged steels. The remaining chapters explore the influence of low-cycle damage on fracture toughness; fracture of structural alloys at temperatures approaching absolute zero; fracture mechanisms in Si-Al-O-N ceramics; propagation and bifurcation of cracks in quartz; and the effect of pressure and environment on the fracture and yield of polymers. This monograph will be a useful resource for metallurgists, materials scientists, and structural and mechanical engineers.
