Since its Californian beginnings a generation ago, Neurolinguistic Programming (NLP) has won world-wide recognition as probably the most powerful set of tools available for improving communication, thinking and problem-solving. Derived from the study of leading practitioners in fields as disparate as psychotherapy and selling, NLP is now used extensively in business, management, human resource development and sport. Dr Alder's Handbook brings together in one volume the ideas and skills involved in applying NLP to achieve superior performance at both the personal and the

Part 1 sets out the underlying principles and introduces key concepts such as outcomes, representational systems, anchoring, modelling and reframing, together with the techniques required for putting them to work. Part 2 shows how to use NLP in training, selling, negotiating, interviewing, coaching and presentation.

Throughout the text there are examples and exercises designed to help readers profit from, rather than simply understand, the procedures described. Other valuable features include a glossary of terms and a sources and resources section containing an annotated reading list and details of organizations offering NLP training. Anyone seeking a

The Origins of NLP brings together the recollections and thoughts of some of the main protagonists from the very early days of NLP. In 1971 Richard Bandler and Frank Pucelik were students at Kresage College at the University of California Santa Cruz. They had a strong mutual interest in Gestalt Therapy, Frank because of his traumatic time in Vietnam and because he had been working with some disaffected and drug-addicted kids, and Richard because he had been working with Science and Behavior Books on transcribing and editing Fritz Perls' seminal work, The Gestalt

Therapy. They started a local Gestalt group and ran 2-3 sessions a week collaborating and experimenting with the language of therapy. They started achieving some brilliant results but were having problems transferring their skills to others and so Richard invited one of their college professors, John Grinder, to observe what they were doing in order that he would, hopefully, be able to deconstruct what they were doing that was so effective. John was a professor of Linguistics and was instantly impressed with the work that they were doing. He was able to add more structure and in due course the three of them formalised what is now known as

After introducing the essential building blocks of deep neural networks, Magnus Ekman shows how to use fully connected feedforward networks and convolutional networks to solve real problems, such as predicting housing prices or classifying images. You'll learn how to represent words from a natural language, capture semantics, and develop a working natural language translator. With that foundation in place, Ekman then guides you through building a system that inputs images and describes them in natural language. Throughout, Ekman provides concise, well-annotated code examples using TensorFlow and the Keras API. (For comparison and easy migration
