Hans Joas is one of the foremost social theorists in Germany today. Based on Joas's celebrated study of George Herbert Mead, this work reevaluates the contribution of American pragmatism and European philosophical anthropology to theories of action in the social sciences. Joas also establishes direct ties between Mead's work and approaches drawn from German traditions of philosophical anthropology. Joas argues for adding a third model of action to the two predominant models of rational and normative action—one that emphasizes the creative character of human action. This model encompasses the other two, allowing for a more comprehensive theory of action. Joas elaborates some implications of his model for theories of social movements and social change and for the status of action theory in sociology in the face of competition from theories advanced by Luhmann and Habermas. The problem of action is of crucial importance in both sociology and philosophy, and this book—already widely debated in Germany—will add fresh impetus to the lively discussions current in the English-speaking world.

This is an unusual book. Combining social science fiction, utopianism, pragmatism, sober analysis and innovative social theory, the authors address one of the biggest dilemmas of our age - how to solve the problems arising from mass displacement. As early versions of the solution proposed by Robin Cohen and Nicholas Van Hear filtered out, their vision of a new, networked, transnational archipelago, called Refugia, was immediately denounced or met with scepticism by established refugee scholars. Others were more intrigued, more open-minded, or perhaps just holding their fire until this book was finally published. As it at least has the virtue of originality, why not judge the proposal for yourself? Read it and craft your own critique. The authors have initiated an openly pro-refugee vision that all can help to shape. Written in a clear and direct style, this book will appeal to scholars and students in social sciences courses (political and social theory, sociology, anthropology, politics, law, security studies), practitioners in the refugee/migration management, as well as to an informed public ready to engage with this pressing issue.

Electron Paramagnetic Resonance Investigations of Biological Systems by Using Spin Labels, Spin Probes, and Intrinsic Metal Ions Part A & B, are the latest volumes in the Methods in Enzymology series, continuing the legacy of this premier serial with quality chapters authored by leaders in the field. This volume covers research methods centered on the use of Electron Paramagnetic Resonance (EPR) techniques to study biological structure and function. Timely contribution that describes a rapidly changing field Leading researchers in the field Broad coverage: Instrumentation, basic theory, data analysis, and applications

This open access book focuses on both the theory and practice associated with the tools and approaches for decisionmaking in the face of deep uncertainty. It explores approaches and tools supporting the design of strategic plans under deep uncertainty, and their testing in the real world, including barriers and enablers for their use in practice. The book broadens traditional approaches and tools to include the analysis of actors and networks related to the problem at hand. It also shows how lessons learned in the application process can be used to improve the approaches and tools used in the design process. The book offers guidance in identifying and applying appropriate approaches and tools to design plans, as well as advice on implementing these plans in the real world. For decisionmakers and practitioners, the book includes realistic examples and practical guidelines that should help them understand what decisionmaking under deep uncertainty is and how it may be of assistance to them. *Decision Making under Deep Uncertainty: From Theory to Practice* is divided into four parts. Part I presents five approaches for designing strategic plans under deep uncertainty: Robust Decision Making, Dynamic Adaptive Planning, Dynamic Adaptive Policy Pathways, Info-Gap Decision Theory, and Engineering Options Analysis. Each approach is worked out in terms of its theoretical foundations, methodological steps to follow when using the approach, latest methodological insights, and challenges for improvement. In Part II, applications of each of these approaches are presented. Based on recent case studies, the practical implications of applying each approach are discussed in depth. Part III focuses on using the approaches and tools in real-world contexts, based on insights from real-world cases. Part IV contains conclusions and a synthesis of the lessons that can be drawn for designing, applying, and implementing strategic plans under deep uncertainty, as well as recommendations for future work. The publication of this book has been funded by the Radboud University, the RAND Corporation, Delft University of Technology, and Deltares.

Few themes have been as central to sociology as class and yet class remains a perpetually contested idea. Sociologists disagree not only on how best to define the concept of class but on its general role in social theory and indeed on its continued relevance to the sociological analysis of contemporary society. Some people believe that classes have largely dissolved in contemporary societies; others believe class remains one of the fundamental forms of social inequality and social power. Some see class as a narrow economic phenomenon whilst others adopt an expansive conception that includes cultural dimensions as well as economic conditions. This book explores the theoretical foundations of six major perspectives of class with each chapter written by an expert in the field. It concludes with a conceptual map of these alternative approaches by posing the question: If class is the answer, what is the question?

The only pathology textbook written specifically for physical therapy, this edition continues to provide practical and easy access to information on specific diseases and conditions as they relate to physical therapy practice. Coverage includes guidelines, precautions, and contraindications for interventions with patients who have musculoskeletal or neuromuscular problems, as well as other medical conditions such as diabetes or heart disease. Logically organized content offers at-a-glance access to essential information on common illnesses, diseases, adverse drug effects, organ transplantation, laboratory values, and more to ensure the most reliable and effective physical therapy for patients. Up-to-date coverage with contributions from more than 100 content experts in pathology and physical therapy. Revised content throughout provides the most current information required to be an effective practitioner. Full-color interior design, photos, and illustrations visually reinforce key concepts. A Therapist's Thoughts offers personal and clinical insights from experienced therapists specializing in cancer, diabetes, cystic fibrosis, women's health, lymphedema, psychological problems, and much more. Special Implications for the Therapist boxes provide information and ideas to consider when formulating a plan of care that addresses precautions, contraindications, and best practice specific to physical therapy. Current information on conditions, medical testing and treatment, and practice models keeps you up to date on the latest research findings and recent changes in the field. Key information presented in an at-a-glance format is organized by body system for easy reference. Basic science information addresses the clinical implications of disease within the rehabilitation process, covering common illnesses and diseases, adverse effects of drugs, organ transplantation, laboratory values, and much more. Coverage includes updated information on standard precautions. Separate chapter addresses laboratory tests and values that are important in physical therapy practice. Separate appendix provides guidelines for activity and exercise. A focus on health promotion and disease prevention is featured throughout the text.

Ideas about social structure and social networks are very old. People have always believed that biological and social links among individuals are important. But it wasn't until the early 1930s that systematic research that explored the patterning of social ties linking individuals emerged. And it emerged, not once, but several times in several different social science fields and in several places. This book reviews these developments and explores the social processes that wove all these "schools" of network analysis together into a single coherent approach.

Members of the genus *Staphylococcus* play important roles in disease causation in humans and animals. Over the past decade, the completed sequencing of many staphylococcal genomes has contributed to a surge in the number of publications, which have promoted a tremendous

advance in our knowledge of these important pathogens. Significant developments include the emergence of new and highly virulent strains of *S. aureus*, advances in tracking the evolution of human and animal adapted strains, a heightened appreciation of the role of mobile genetic elements in antibiotic resistance and pathogenesis, and important insights into staphylococcal physiology, immune evasion strategies, and cell surface proteins, as well as significant advances in vaccine development and therapeutics. This Research Topic will focus attention on the latest developments in these areas as they pertain to *S. aureus* and members of the coagulase-negative Staphylococci, and will also strive to identify areas of future development.
